

Mosites #PSA

Mosites PSA is a high performance acrylic adhesive transfer tape. It is designed for applications that require adhesion to low surface energy and other challenging substrates. This material is water, humidity, and chemically resistant, and has a moisture stable PCK liner. It shows a high initial tack and adhesion to most substances and is excellent for use on uneven or rough surfaces. Service temperature range is -40F to 350F in normal use. Material should be stored at 75F and 50% or lower relative humidity. Shelf life will be two years when stored in that manner.

Typical Physical Properties

Adhesive Thickness (mils).....	2.0
Liner Thickness (mills).....	5.8
Peel Adhesion (PSTC-101-Method A) for 30 minutes (oz/in).....	136
Peel Adhesion (PSTC-10-Method A) for 24 hours(oz/in).....	140
Shear (PSTC-107-Method A).....	>55 hours
